No Tax ID assigned

Isolate Assembly QC Report 12/02/2015

1. Project Information

Program	Microbial/CSP 2014
Seq Proj ID	1092861
Sequencing Project Name	Klosterneuburg WWTP active sludge D23_H0v2

2. Read Statistics

Illumina Std PE Statistics

File name	9720.1.141321.AAGAGGC–TCGCATA.anqdpht.fastq
Library	ATSGB
Number of reads	15,075,562
Read type	2x149 bp

3. Read QC Results

The following are the results of reads screened against artifact sequences. Pairs of matching reads (>=95% ID) were removed from the dataset.

Illumina Std PE Read Filter Statistics

Description	Num Reads	Pct Reads
Input	15,075,562	100
Normalized removed	13,700,632	90.9
Total removed	13,700,632	90.9
Total remaining	1,374,930	9.1

The following are the results of reads screened against potential reagent and process contaminants but were not removed from the dataset.

Illumina Std PE Contamination Identification Statistics

Description	Num Reads	Pct Reads
Input	15,075,562	100
Contam identified	20	0.0

List of Contaminants Identified

Description	Num Reads	Pct Reads
Escherichia	20	0.00

4. Assembly Statistics

Assembly method	SPAdes
Scaffold total	244
Contig total	259
Scaffold sequence length	1.895 Mb
Contig sequence length	1.894 Mb 0.016% gap
Scaffold N/L50	54/10.686 kb
Contig N/L50	54/10.686 kb
Largest Contig	57.3 kb
Number of scaffolds >50 kb	1
Pct of genome in scaffolds >50 kb	3.02
Pct of reads asssembled	78.2

5. Assembly QC Results

GC histogram of the predicted genes on each scaffold, overlaid with GC of hits based on LAST, shown for different taxonomic levels.

Species

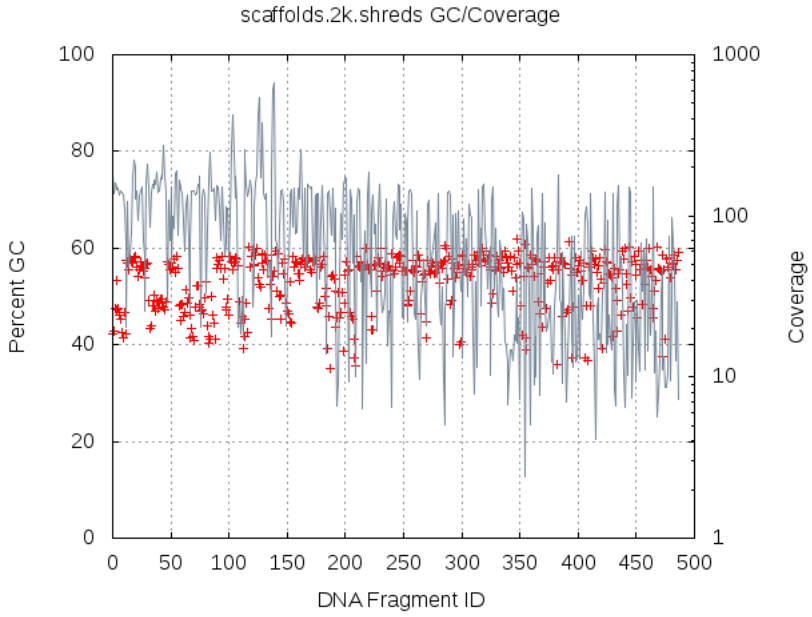
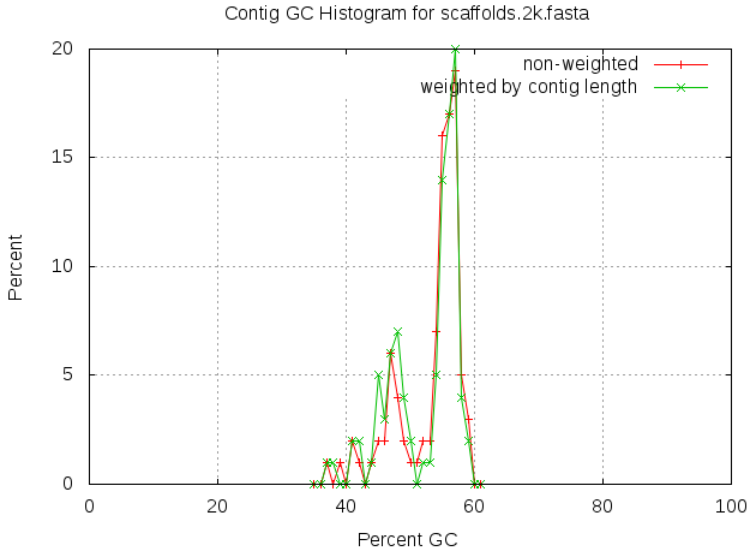
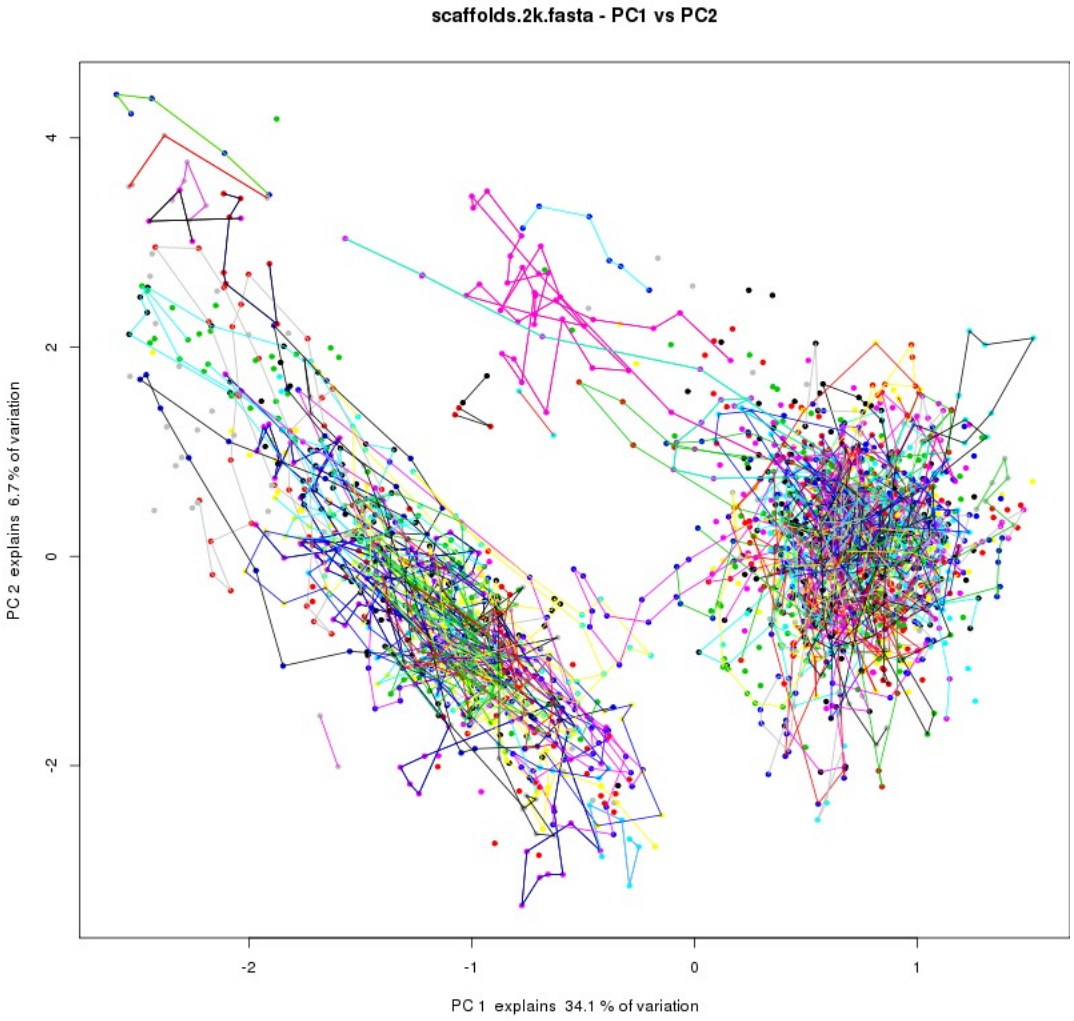
Coverage vs GC. Scaffolds were shredded into non-overlapping 5 kbp fragments and the GC content of each shred was plotted as a point, colored by scaffold id. Coverage was calculated by mapping the fragment library to the final asssembly and plotted as connected points.



GC histogram of the scaffolds, including scaffold length weighted distribution.

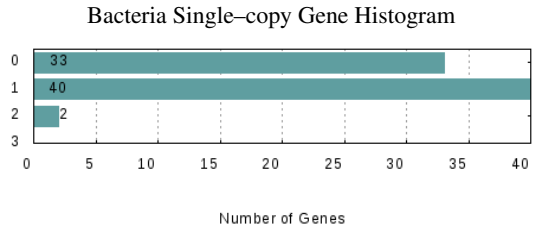


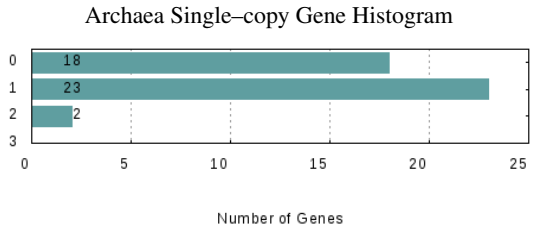
Principal component analysis of tetramer frequencies of scaffolds. Detectable variations are highlighted in color.

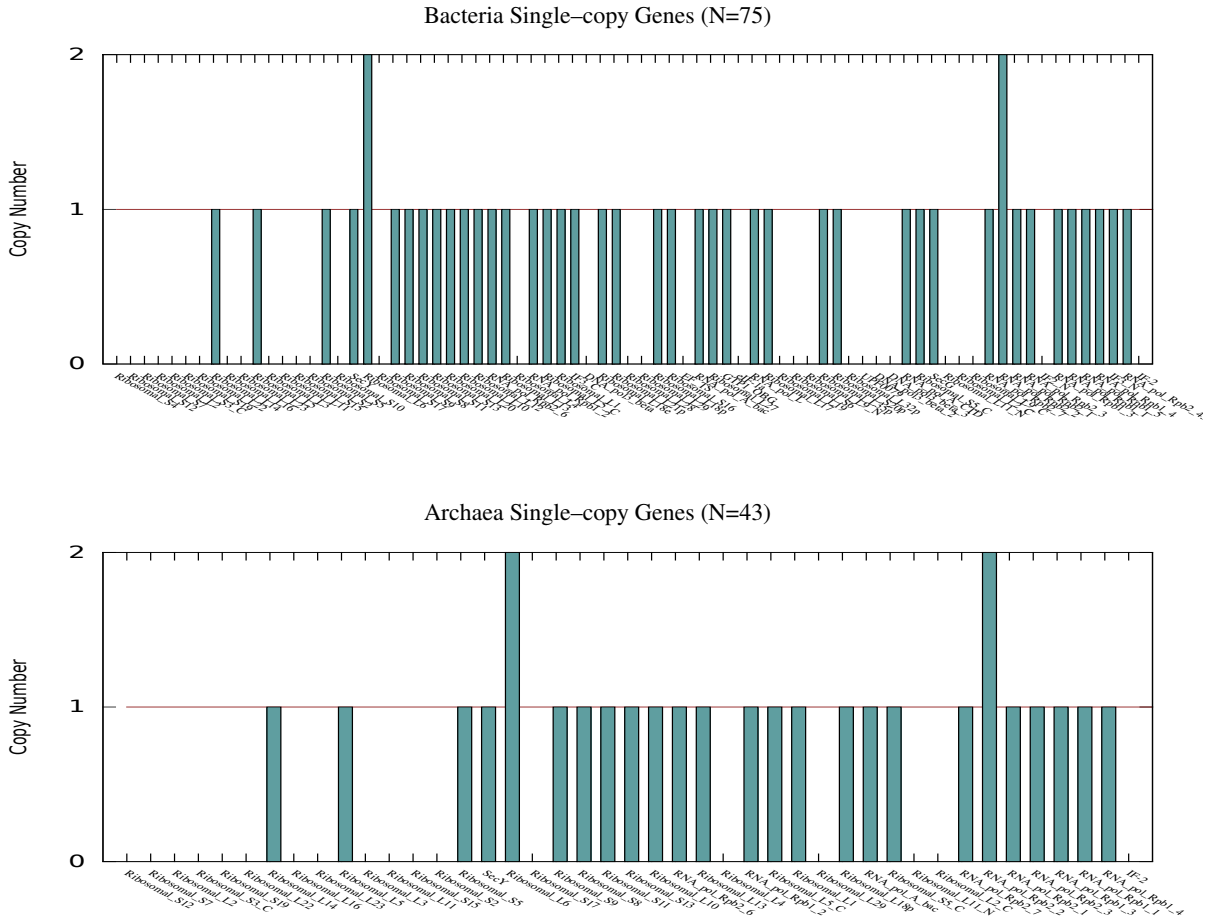


Estimated genome recovery derived from analysis of universal single-copy genes detected in final assembly.

HMM	Pct Recovered
archaea	64.6 %
bacteria	62.22 %







6. Sequence Data Availability

The following sequence fasta files can be downloaded from our JGI portal website.
http://www.jgi.doe.gov/genome-projects

7. Annotation Data Availiability

The annotation of the assembled contigs can be found within IMG.
http://img.jgi.doe.gov

8. Methods

Cell–Enrichment Minimal Draft

Genome sequencing and assembly
The draft genome of *No Tax ID assigned* was generated at the DOE Joint Genome Institute (JGI) using the Illumina technology [1]. An Illumina standard shotgun library was constructed and sequenced using the Illumina NextSeq

platform which generated 15,075,562 reads totaling 2,246.3 Mbp. All general aspects of library construction and sequencing performed at the JGI can be found at http://www.jgi.doe.gov. All raw Illumina sequence data was passed through DUK [2], a filtering program developed at JGI, which removes known Illumina sequencing and library preparation artifacts. Furthermore, the reads were screened for human, dog and cat contaminant sequences. Reads with high k–mer coverage (>100X average k–mer depth) were normalized and error corrected to an average depth of 100X. Reads with an average k–mer depth of less than 2X were removed. Normalization was performed using BBNorm [3] and error correction was performed using Tadpole [3]. (1) Artifact filtered and normalized Illumina reads were assembled using SPAdes (version 3.6.0) [4]; (2) assembly contigs were trimmed 200 bp at the ends and discarded if length is <2 kbp or read coverage is <2X (BBMap: nodisk ambig=all maxindel=100 covstats=covstats.txt minhits=2 and filterbycoverage.sh: cov=covstats.txt mincov=2 minr=6 minp=95 minl=2000 trim=200 overwrite=true). Parameters for the SPAdes assembly were –t 16 –m 120 —sc —careful –k 25,55,95 —12. The final draft assembly contained 259 contigs in 244 scaffolds, totalling 1.894 Mbp in size and was based on 204.9 Mbp of Illumina data.
