

**GUIDE3 and GUIDE7  
desimeter 'metrology'  
with Gaia cross-matches**

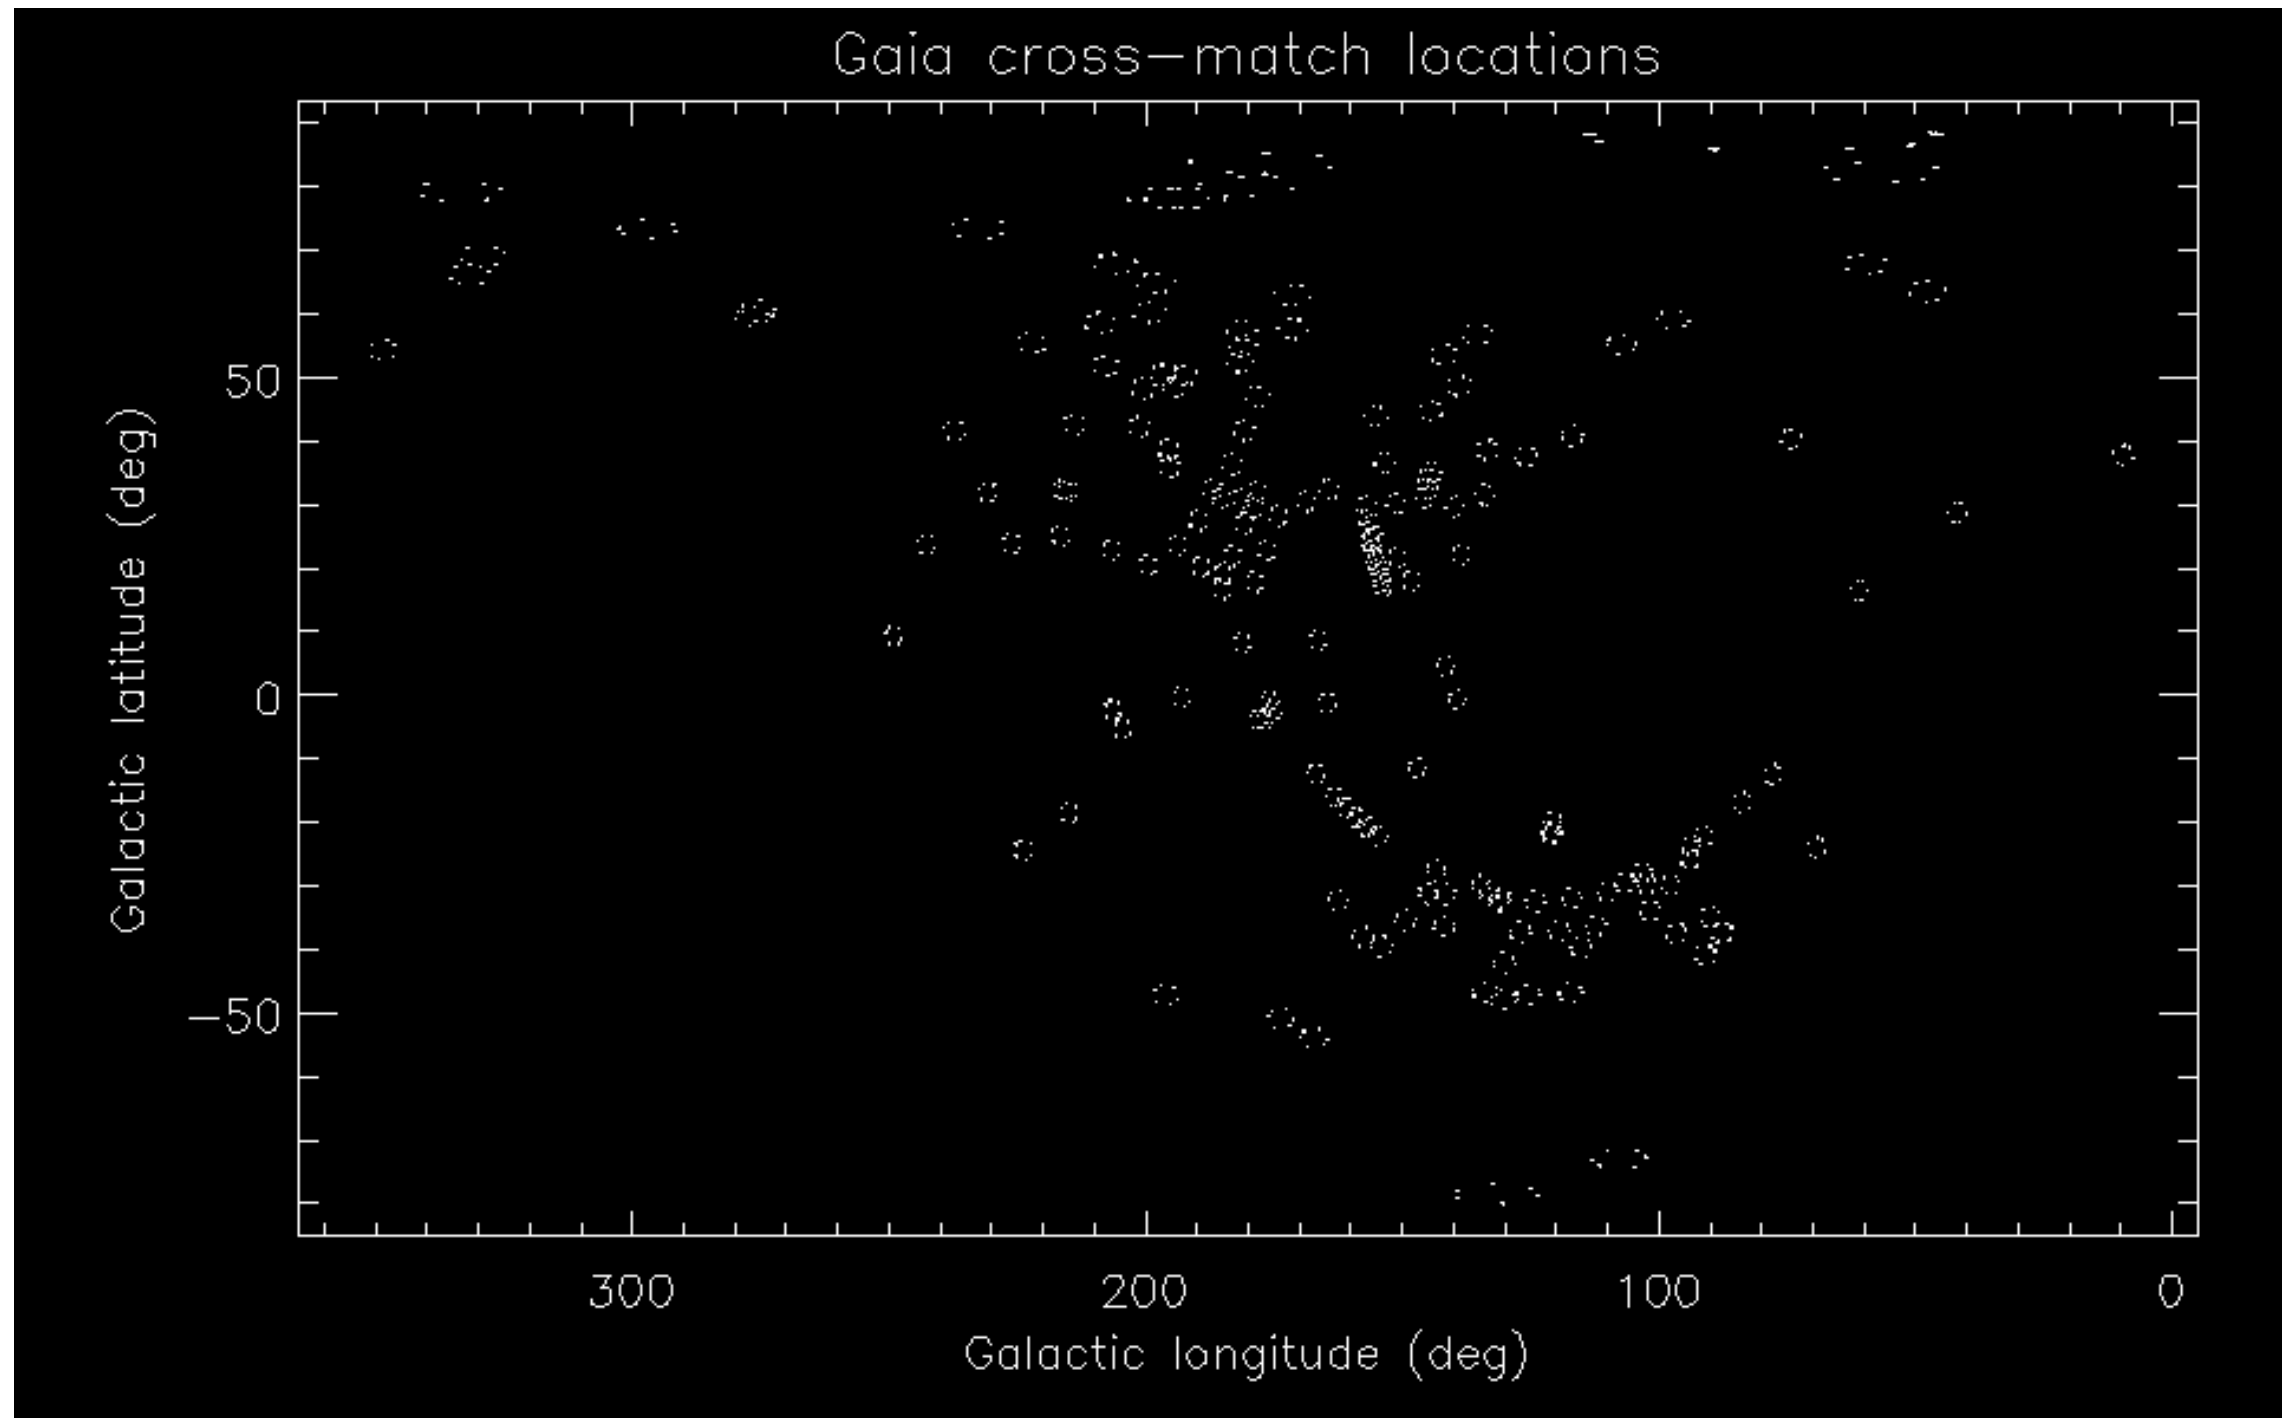

# sample of GFA reductions

- Use first frame of each guide cube throughout DESI commissioning
- Restrict to the subset with WCS recalibration pattern matching  $\text{CONTRAST} > 2$  in all 6 guide cameras
- 2044 GFA exposures from 91 unique DESI observing nights, spanning 20191023 (first night of GFA guiding) to 20200315 (final night of DESI commissioning)
- 8 of these crash in `desi_fit_guide_star_coordinates` due to missing ADC header information in raw guide cubes

# sample of GFA reductions

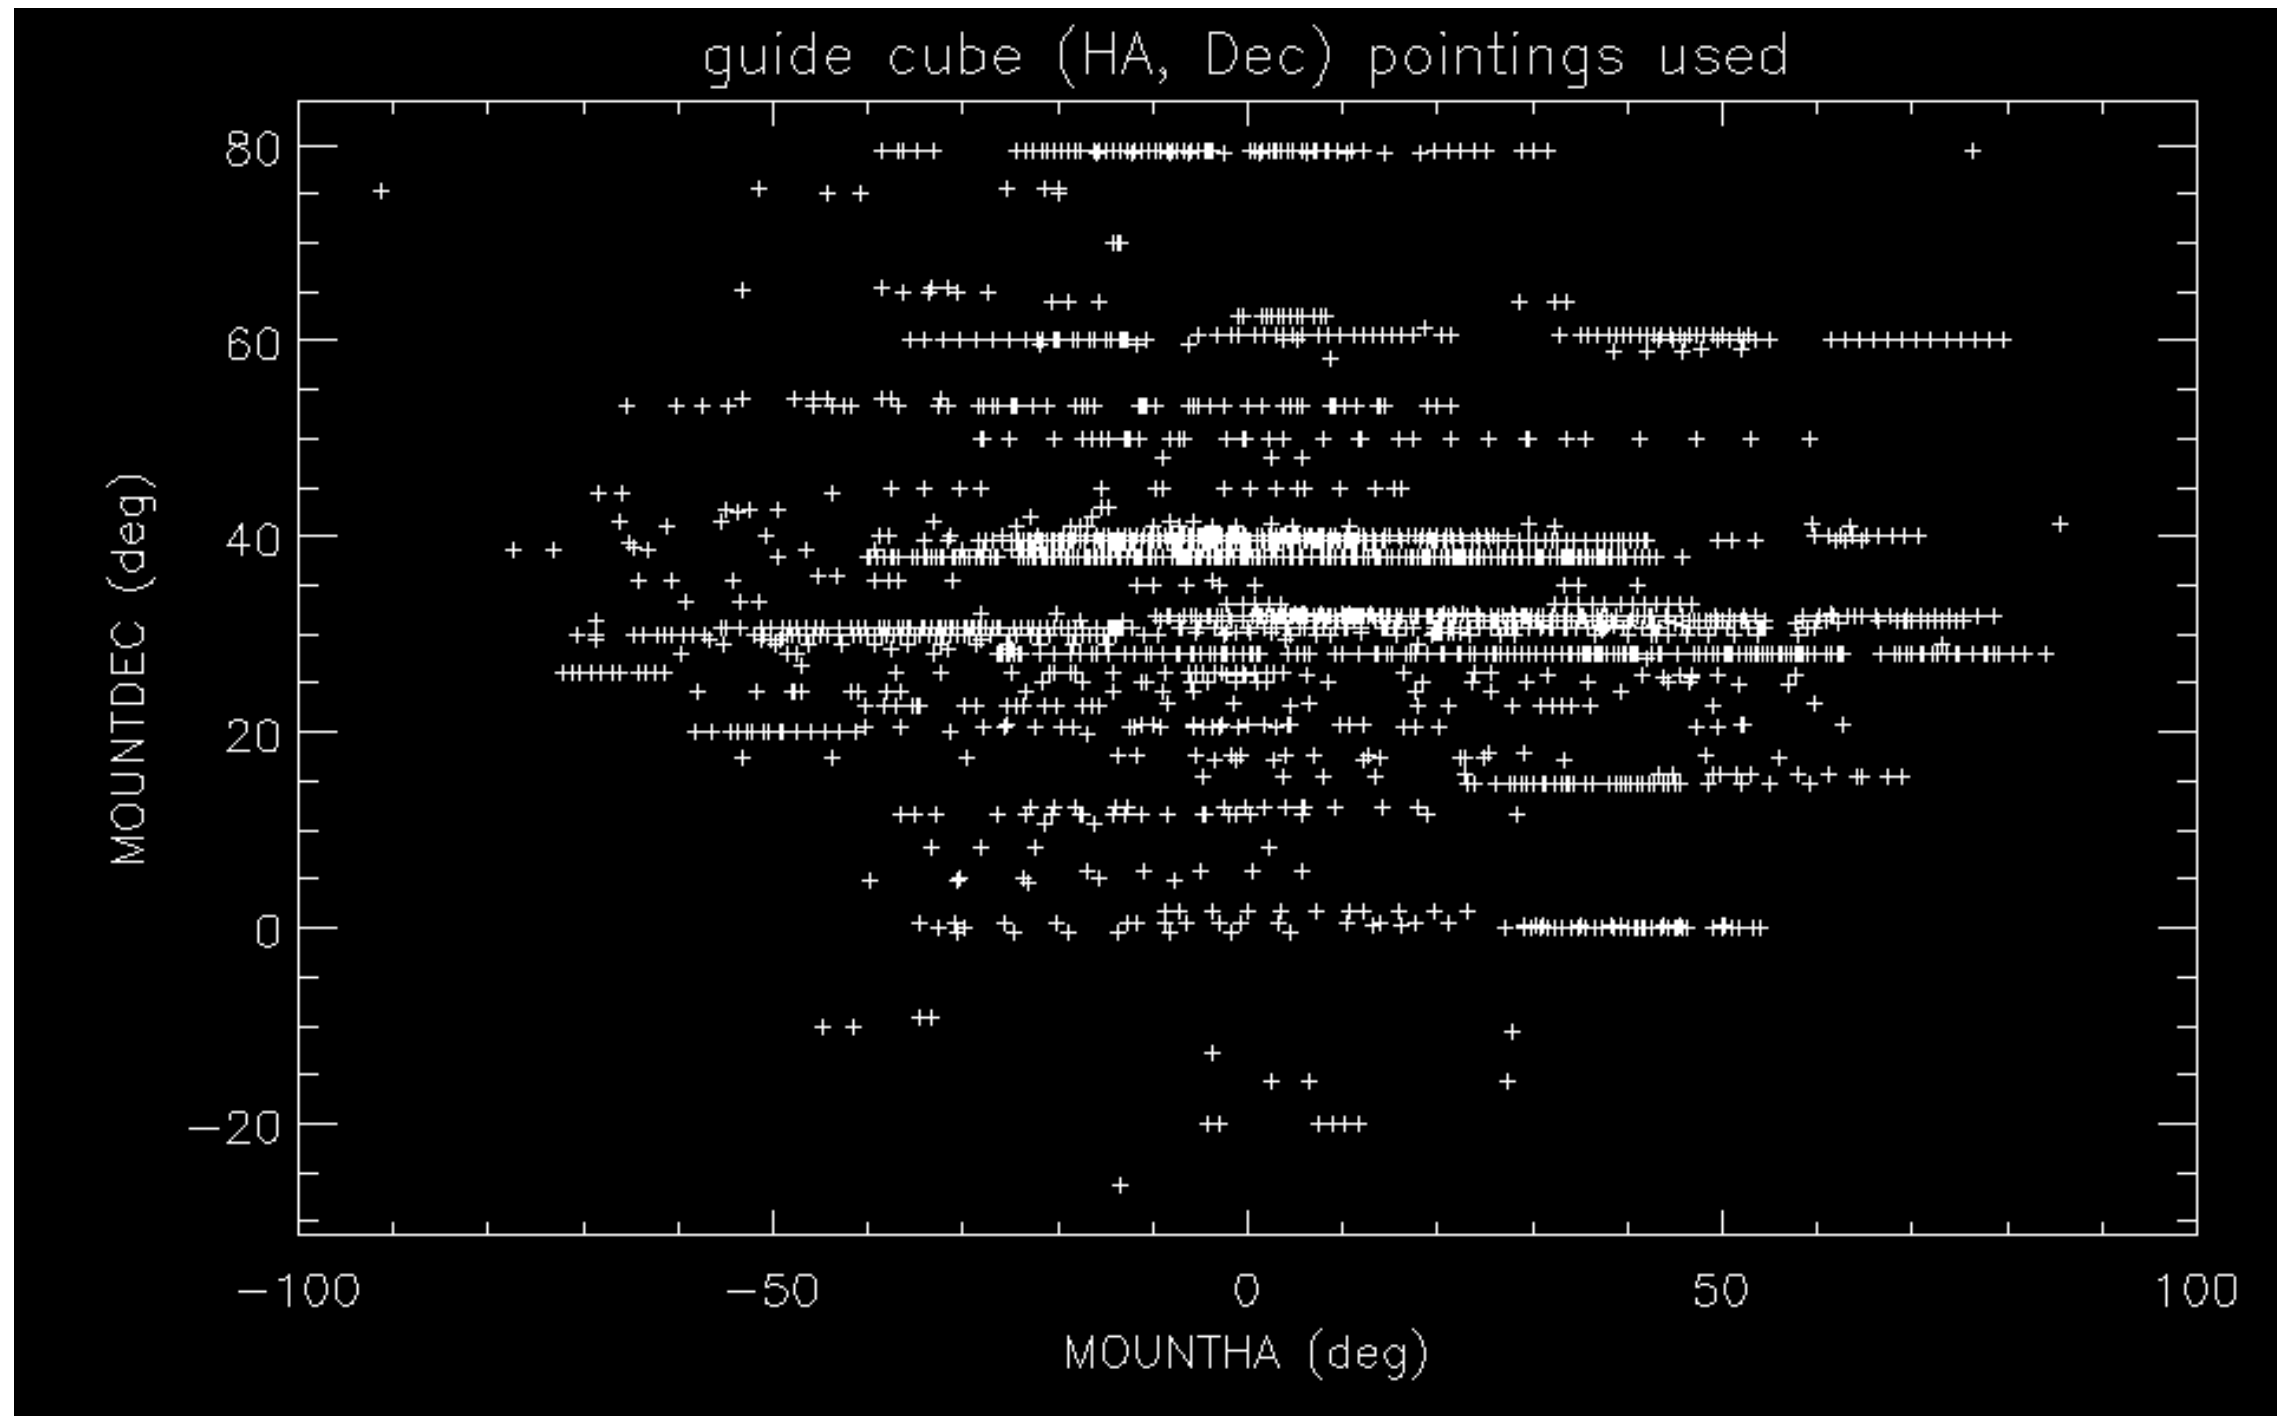

# sample of GFA reductions

# sample of GFA reductions

# getting focal plane and petal coordinates for Gaia stars

- Created a modified version of Julien's `desi_fit_guide_star_coordinates` script that fits a `FieldModel` object using the guide cameras present already in `fp-metrology.csv`
- Use `FieldModel` object to translate  $(ra\_gaia, dec\_gaia)$  for good cross-matches ( $< 2$  asec) into  $(X\_FP, Y\_FP, X\_PTL, Y\_PTL, Z\_PTL)$  for ***all*** guide cameras, including those without metrology in `fp-metrology.csv`

# quality cuts

- Initially wanted to make a cut on FieldModel RMS\_ARCSEC value but forgot to do this
- Require Gaia stars to have gfa\_reduce (min\_edge\_dist\_pix > 10) and (dq\_flags == 0)

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

# At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

- The previous 8 plots show that for the 8 GFA cameras with fp-metrology.csv metrology available, the pinholes consistently fall close to, but not exactly at, the 4 corners of each GFA camera's image area
- So it's worth figuring out the exact (x\_gfa, y\_gfa) values in each case
- The following four plots show that the (x\_gfa , y\_gfa) values of each PINHOLE\_ID are consistent at the ~0.3 (~0.1) GFA pixel RMS level across cameras with existing metrology in fp-metrology.csv

At what  $(x_{\text{gfa}}, y_{\text{gfa}})$  should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what  $(x_{\text{gfa}}, y_{\text{gfa}})$  should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what  $(x_{\text{gfa}}, y_{\text{gfa}})$  should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

At what  $(x_{\text{gfa}}, y_{\text{gfa}})$  should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

# At what (x\_gfa, y\_gfa) should the planar models be evaluated to fill in the missing GUIDE3 and GUIDE7 metrology?

Evaluate the planar models  $X_{FP}(x_{gfa}, y_{gfa})$  and  $Y_{FP}(x_{gfa}, y_{gfa})$  for each guide camera at the mean (x\_gfa, y\_gfa) per PINHOLE\_ID:

```
{
  PINHOLE_ID: 1,
  MEAN_X_GFA: 0.90445804595947266,
  MEAN_Y_GFA: 13.898725032806396
}
{
  PINHOLE_ID: 2,
  MEAN_X_GFA: 2047.9033813476562,
  MEAN_Y_GFA: 13.899508476257324
}
{
  PINHOLE_ID: 3,
  MEAN_X_GFA: 2047.9044799804688,
  MEAN_Y_GFA: 1044.8986511230469
}
{
  PINHOLE_ID: 4,
  MEAN_X_GFA: 0.90369510650634766,
  MEAN_Y_GFA: 1044.8976745605469
}
```

Then translate (X\_FP, Y\_FP) to (X\_PTL, Y\_PTL) using desimeter fp2ptl. fp2ptl gives Z\_PTL off by ~2.3 mm relative to the metrology file, so for Z\_PTL in GUIDE3 and GUIDE7 just take the average of Z\_PTL per PINHOLE\_ID for the 8 cameras with existing metrology

# Sanity check: how well is fp\_metrology.csv data for GUIDE0, GUIDE2, GUIDE5, GUIDE8 reproduced by this procedure?

PETAL_LOC :	0 ; RMS 1D in XY :	10.534562 micron
PETAL_LOC :	0 ; RMS in Z :	6.9103197 micron
PETAL_LOC :	2 ; RMS 1D in XY :	7.7207323 micron

TODO: patch these values into fp-metrology.csv by editing write\_focal\_plane\_metrology script

How much was gained by using Gaia for GUIDE3/GUIDE7 ( $X_{PTL}$ ,  $Y_{PTL}$ ) rather than just averaging those values for 8 petals with existing metrology?

How much was gained by using Gaia for GUIDE3/GUIDE7 ( $X_{\text{PTL}}$ ,  $Y_{\text{PTL}}$ ) rather than just averaging those values for 8 petals with existing metrology?

How much was gained by using Gaia for GUIDE3/GUIDE7 ( $X_{\text{PTL}}$ ,  $Y_{\text{PTL}}$ ) rather than just averaging those values for 8 petals with existing metrology?

How much was gained by using Gaia for GUIDE3/GUIDE7 (X\_PTL, Y\_PTL) rather than just averaging those values for 8 petals with existing metrology?

How much was gained by using Gaia for GUIDE3/GUIDE7 (X\_PTL, Y\_PTL) rather than just averaging those values for 8 petals with existing metrology?

RMS X_PTL(Gaia) shift relative to mean of GFA's w/ real metrology :	187.78971 micron
RMS Y_PTL(Gaia) shift relative to mean of GFA's w/ real metrology :	174.27949 micron

given that the typical 1D RMS of my Gaia-based procedure relative to fp-metrology.csv truth for PETAL\_LOC=[0, 2, 5, 8] is ~9 microns, the gain is up to a factor of ~20x

# end-to-end validation

# end-to-end validation

# appendix: miscellaneous

# 2+ mm Z\_PTL discrepancy

When I convert (X\_FP, Y\_FP) from fp-metrology.csv to (X\_PTL, Y\_PTL, Z\_PTL) using fp2ptl, I get agreement within roundoff for (X\_PTL, Y\_PTL) for all DEVICE\_TYPE=GFA pinholes. But the Z\_PTL values from fp2ptl disagree with those in fp-metrology.csv by ~2+ mm (see above histogram)

Code: <https://gist.github.com/ameisner/1173899bbd6a0c44d317fd6a80b2ff99>.
