

MRI Focused Introduction to VisIt

LLNL 2020 Tutorials

LLNL VisIt Team

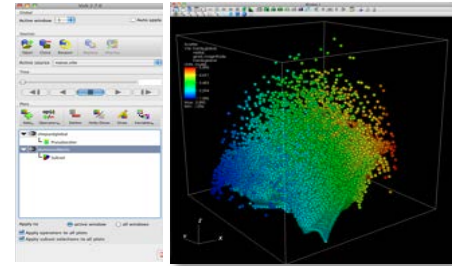

This work was performed under the auspices of the U.S. Department of Energy by Lawrence Livermore National Laboratory under contract DE-AC52-07NA27344. Lawrence Livermore National Security, LLC

LLNL-PRES-784377

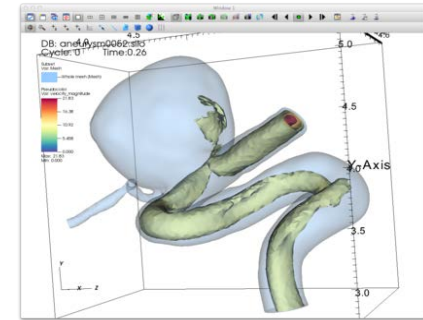

Outline

- VisIt Project Introduction
- Tips for Remote Usage
- Visualization of an Aneurysm (Blood Flow) Simulation
- Scripting VisIt with Python
- Exploring MRI Data
- Connected Components
- CT vs CAD Model Comparison

Intro to VisIt

Simulation Exploration

Tutorial Resources

- **Tutorial Materials:**

- http://visitusers.org/index.php?title=VisIt_Tutorial

- **How to get in touch:**

- **VisIt Hotline:** (925) 424-2847 [42-VIS onsite]

- **GitHub:** <https://github.com/visit-dav/visit>

- **Email List:** visitusers@ornl.gov

Tutorial Data Acknowledgements

Aneurysm Simulation Dataset

Simulated using the LifeV (<http://www.lifev.org/>) finite element solver.

Available thanks to:

- Gilles Fourestey and Jean Favre
Swiss National Supercomputing Centre (<http://www.cscs.ch/>)

Potential Flow Simulation Dataset

Simple tutorial simulation built using MFEM (<https://mfem.org/>)

Available thanks to:

- Aaron Fisher and Mark Miller, LLNL

Vislt Project Introduction

vis·it

/ˈvɪzɪt/

verb

1. go to see and spend time with (someone) socially.

"I came to visit my grandmother"

synonyms: call on, call in on, pay a call on, pay a visit to, pay someone a call, pay someone a visit, go to see, come to see, look in on; [More](#)

2. inflict (something harmful or unpleasant) on someone.

"the mockery **visited upon** him by his schoolmates"

synonyms: happen to, [overtake](#), [befall](#), come upon, fall upon, [hit](#), [strike](#)

"it is hard to imagine a greater psychological cruelty visited on a child"

noun

1. an act of going or coming to see a person or place socially, as a tourist, or for some other purpose.

"a visit to the doctor"

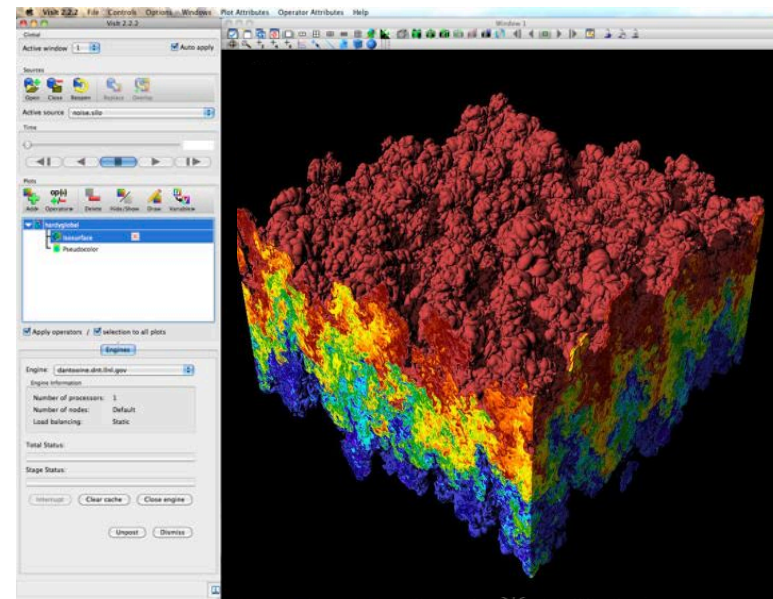

synonyms: social call, [call](#)

"after reading the play she paid a visit to the poet"

VisIt is an open source, turnkey application for data analysis and visualization of mesh-based data

- Production end-user tool supporting scientific and engineering applications.
- Provides an infrastructure for parallel post-processing that scales from desktops to massive HPC clusters.
- Source released under a BSD style license.

Pseudocolor plot of Density
(27 billion element dataset)

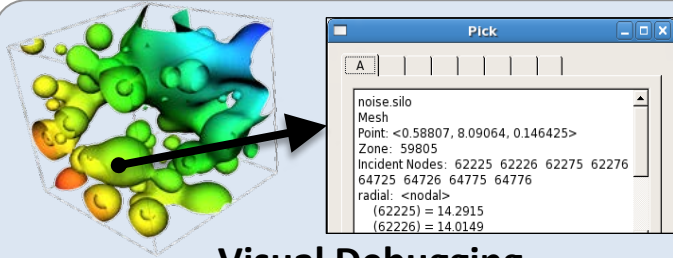

VisIt supports a wide range of use cases

Data Exploration

Quantitative Analysis

Visual Debugging

Comparative Analysis

Presentation Graphics

VisIt uses MPI for distributed-memory parallelism on HPC clusters

Full Dataset
(27 billion total elements)

3072 sub-grids
(each 192x129x256 cells)

We are enhancing VisIt's pipeline infrastructure to support threaded processing and many-core architectures

Visit 3.0 (April 2019) included major updates to our software development process

- We migrated our source repo from *svn* at NERSC to *git* on GitHub and our issue tracking from an ORNL Redmine instance to GitHub

- <https://github.com/visit-dav/visit>

GitHub

Visit source repo and issue tracking on GitHub

- We ported our legacy docs to Sphinx, now hosted on Read the Docs

- <https://visit-sphinx-github-user-manual.readthedocs.io/en/develop/>

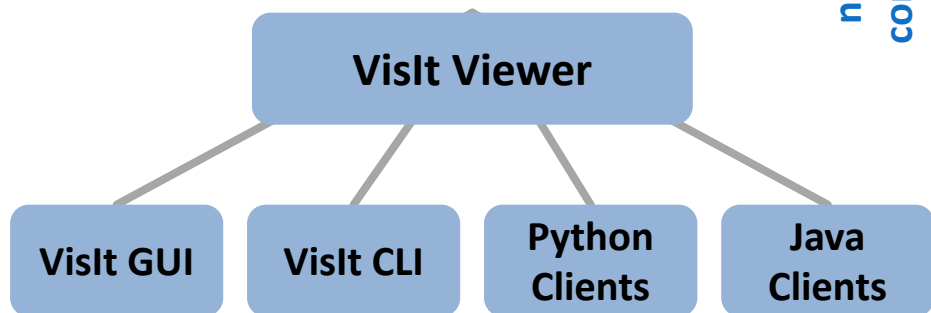

Read the Docs

Visit manuals on Read the Docs

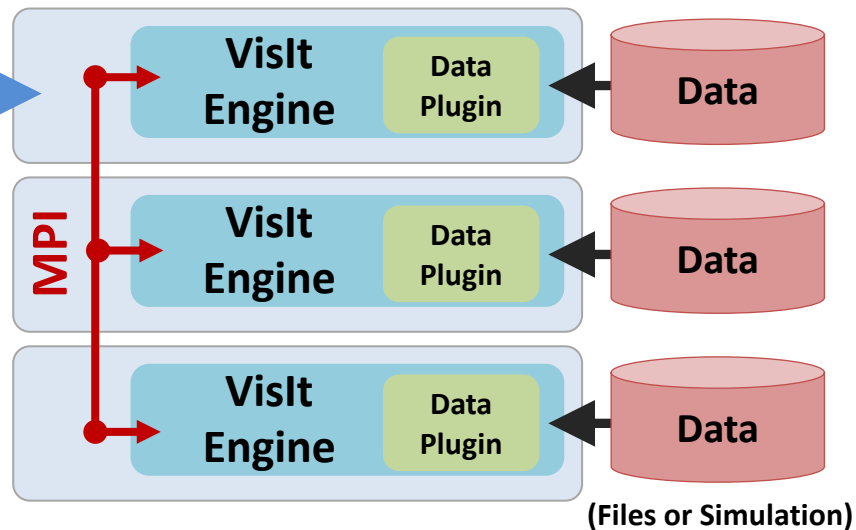

VisIt employs a parallelized client-server architecture

Client Computer

network
connection

Parallel HPC Cluster

VisIt automatically switches to a scalable rendering mode when plotting large data sets on HPC clusters

In addition to scalable surface rendering, VisIt also provides scalable volume rendering

VisIt's Visualization Building Blocks

VisIt's interface is built around five core abstractions

- **Databases:** Read data
- **Plots:** Render data
- **Operators:** Manipulate data
- **Expressions:** Generate derived quantities
- **Queries:** Summarize data

Examples of VisIt Pipelines

- **Databases:** Read data
- **Plots:** Render data
- **Operators:** Manipulate data
- **Expressions:** Generate derived quantities
- **Queries:** Summarize data

Open a database, which reads from a file
(Example: Open file1.hdf5)

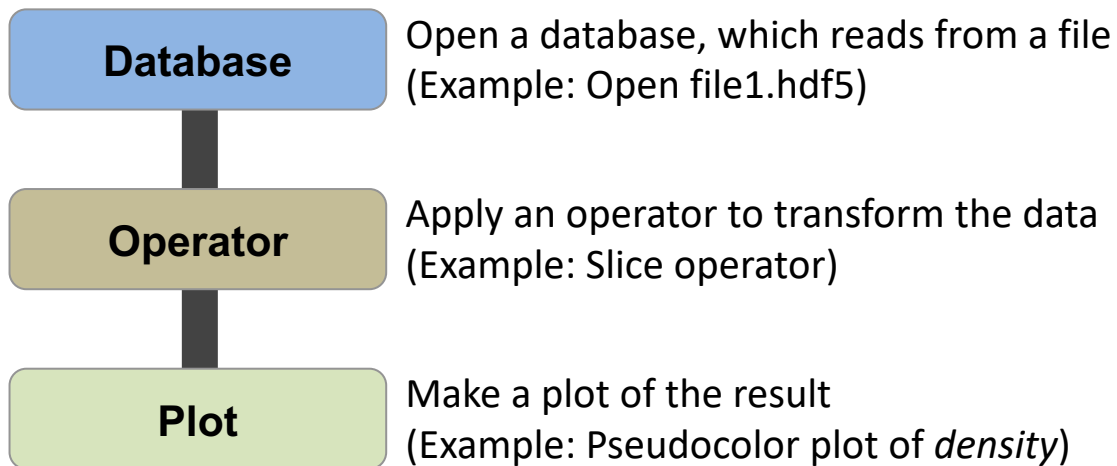

Make a plot of a field in the database
(Example: Pseudocolor plot of *density*)

Examples of VisIt Pipelines

- **Databases:** Read data
- **Plots:** Render data
- **Operators:** Manipulate data
- **Expressions:** Generate derived quantities
- **Queries:** Summarize data

Additional Slides

Visualization Techniques for Mesh-based Simulations

Pseudocolor rendering maps scalar fields to a range of colors

Pseudocolor rendering of Elevation

Pseudocolor rendering of Density

Volume Rendering cast rays through data and applies transfer functions to produce an image

Isosurfacing (Contouring) extracts surfaces of that represent level sets of field values

Particle advection is the foundation of several flow visualization techniques

- $S(t)$ = position of particle at time t
- $S(t_0) = p_0$
 - t_0 : initial time
 - p_0 : initial position
- $S'(t) = v(t, S(t))$
 - $v(t, p)$: velocity at time t and position p
 - $S'(t)$: derivative of the integral curve at time t

This is an ordinary differential equation.

Streamline and Pathline computation are built on particle advection

- **Streamlines** – Instantaneous paths
- **Pathlines** – Time dependent paths

Meshes discretize continuous space

- **Simulations use a wide range of mesh types, defined in terms of:**
 - A set of coordinates (“nodes” / “points” / “vertices”)
 - A collection of “zones” / “cells” / “elements” on the coordinate set

Points

Uniform

Curvilinear

Unstructured

VisIt uses the “Zone” and “Node” nomenclature throughout its interface.

Mesh fields are variables associated with the mesh that hold simulation state

- Field values are associated with the zones or nodes of a mesh
 - Nodal: Linearly interpolated between the nodes of a zone
 - Zonal: Piecewise Constant across a zone
- Field values for each zone or node can be scalar, or multi-valued (vectors, tensors, etc.)

Nodal Association

Zonal Association

**Vector
Field**

Tensor Field

Material volume fractions are used to capture sub-zonal interfaces

- Multi-material simulations use volume/area fractions to capture disjoint spatial regions at a sub-grid level.
- These fractions can be used as input to high-quality sub-grid material interface reconstruction algorithms.

Species are used to capture sub-zonal weightings

- Species describe sub-grid variable composition
 - Example: Material “Air” is made of species “N2”, “O2”, “Ar”, “CO2”, etc.
- Species are used for weighting, not to indicate sub-zonal interfaces.
 - They are typically used to capture fractions of “atomically mixed” values.

Domain decomposed meshes enable scalable parallel visualization and analysis algorithms

- Simulation meshes may be composed of smaller mesh “blocks” or “domains”.
- Domains are partitioned across MPI tasks for processing.

Adaptive Mesh Refinement (AMR) refines meshes into patches that capture details across length scales

- Mesh domains are associated with patches and levels
- Patches are nested to form an AMR hierarchy

VisIt provides a wide range of plotting features for simulation data across many scientific domains

Streamlines / Pathlines

Vector / Tensor Glyphs

Pseudocolor Rendering

Volume Rendering

Molecular Visualization

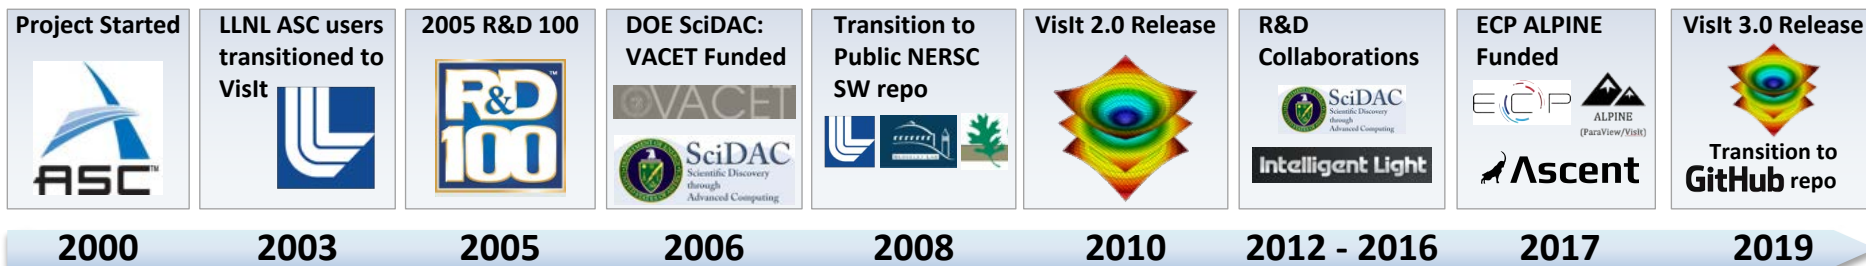

Parallel Coordinates

VisIt is a vibrant project with many participants

- The VisIt project started in 2000 to support LLNL's large scale ASC physics codes.
- The project grew beyond LLNL and ASC with development from DOE SciDAC and other efforts.
- VisIt is now supported by multiple organizations:
 - LLNL, LBNL, ORNL, Univ of Oregon, Univ of Utah, Intelligent Light, ...
- Over 100 person years of effort, 1.5+ million lines of code.

VisIt provides a flexible data model, suitable for many application domains

■ Mesh Types

- Point, Curve, 2D/3D Rectilinear, Curvilinear, Unstructured
- Domain Decomposed, AMR
- Time Varying
- Primarily linear element support, limited quadratic element support

■ Field Types

- Scalar, Vector, Tensor, Material Volume Fractions, Species

The VisIt team releases binaries for several platforms and a script that automates the build process

“How do I obtain VisIt?”

- Use an existing build:
 - For your Laptop or Workstation:
 - Binaries for Windows, OSX, and Linux (RHEL + Ubuntu):
(<https://wci.llnl.gov/simulation/computer-codes/visit/executables>)
 - VisIt on ALCF’s Cooley:
 - <https://www.alcf.anl.gov/user-guides/visit-cooley>
 - Several other HPC centers have VisIt installed
- Build VisIt yourself:
 - “[build_visit](#)” is a script that automates the process of building VisIt and its third-party dependencies. (also at: <https://wci.llnl.gov/simulation/computer-codes/visit/executables>)
 - Fledgling support for building via spack (<https://github.com/spack/spack>)

VisIt supports more than 110 file formats

“How do I get my data into VisIt?”

- The *PlainText* database reader can read simple text files (CSV, etc)
 - http://visitusers.org/index.php?title=Using_the_PlainText_reader
- Experiment with the *visit_writer* utility:
 - <http://visitusers.org/index.php?title=VisItWriter>
- Write to a commonly used format:
 - *VTK, Silo, Xdmf, PVTk*
- We are ramping up support for Mesh-based data in Conduit Blueprint:
 - http://llnl-conduit.readthedocs.io/en/latest/blueprint_mesh.html
- Consult the [Getting Data Into VisIt Manual](#) and its associated [source code examples](#).

VisIt's infrastructure provides a flexible platform for custom workflows

■ C++ Plugin Architecture

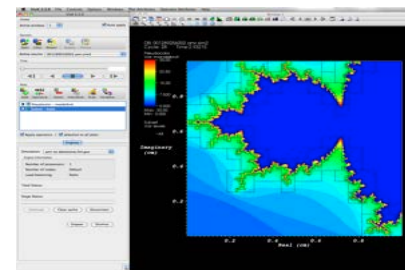

- Custom File formats, Plots, Operators
- Interface for custom GUIs in Python, C++ and Java

■ Python Interfaces

- Python scripting and batch processing
- Data analysis via Python Expressions and Queries

■ In-Situ Coupling

- VisIt's *Libsim* library allows simulation codes to link in VisIt's engine for in situ visualization

VisIt

Simulation

Libsim
Adaptor

VisIt is used as a platform to deploy visualization research

■ DOE Research Collaborations

■ Research Focus Areas

- Light weight In Situ Processing
- Node Level Parallelism
- Distributed Memory Parallel Algorithms

Scaling research:
Scaling to 10Ks of cores and trillions of cells.

Algorithms research:
How to efficiently calculate particle paths in parallel.

Algorithms research:
Reconstructing material interfaces for visualization

Methods research:
How to incorporate statistics into visualization.

DOE's visualization community is collaborating to create open source tools ready for Exascale simulations

Addressing node-level parallelism

- VTK-m is an effort to provide a toolkit of visualization algorithms that leverage emerging node-level HPC architectures
- We are also exploring using VTK-m and DIY to share more distributed-memory infrastructure across projects

<http://m.vtk.org>

DIY

<https://github.com/diatomic/diy>

Addressing I/O gaps with in-situ

- There are several efforts focused on in-situ infrastructure and algorithms

ALPINE

(ParaView/VisIt)

<http://alpine.dsscale.org>

ParaView
Catalyst

<http://www.paraview.org/in-situ>

VisIt LibSim

<https://visit.llnl.gov>

SENSEI
in situ

<http://www.sensei-insitu.org>

Ascent

<https://github.com/Alpine-DAV/ascent>

The VisIt team is investing in Conduit and Ascent to create next generation in situ infrastructure

**Intuitive APIs for in-memory data
description and exchange**

<http://software.llnl.gov/conduit>

**Flyweight in-situ visualization and
analysis for HPC simulations**

<http://ascent-dav.org>
